disguise

Designer specs

Bring big ideas to life

Designer is the software only version of our production suite, which enables designers, project managers and technicians to work on a unified communication and collaboration platform.

From conceptual pre-visualisation through technical specification, sequencing and content compositing all the way to technical set-up, Designer is the flexible but powerful solution.

Using a USB key to unlock these design features, our powerful 3D stage simulator can be used on your own laptop, from which you can build up your show, test different stages and screens, add props, lighting and video content to the timeline, then create fly-through movies to show your client what the show is really going to look like and get it signed off.

When it's show time, just take your project from your own device, transfer it to the on-site disguise rack-mount and press play. Using the same system throughout will continue to save you time and money.

What's in the package: Designer USB key.

Hardware specifications

Operating System: Minimum Windows 7, 8, 8.1 or 10 64-bit
CPU: Intel i5 2.3Ghz Quad Core or above
GPU: 1GB Video RAM, DX11.1 compatible
Memory: 2GB RAM

Software features

Playback:
Output video with watermark
Output DMX with watermark
Render unwatermarked feed movies to file
Design and pre-visualise:
Build and save projects
Make visualiser movies to file
Make feed movie files
Make screen grab files
Input DMX/MIDI/OSC
Transfer project to disguise system
MultiEdit in disguise Net

Media file specifications

Video playback:
.mov (anim, pjpg, DXV, Hap, HapQ)
Image formats: .bmp, .jpg, .png, .tiff, .tga
Audio playback: .wav/.mp3 (44.1kHz, stereo)
3D Mesh format: .obj
